No. 2408/10 – TUESDAY, OCTOBER 29, 2024

(Published by Authority)

PART IV (B) – LOCAL GOVERNMENT

Local Government Notifications

KOLONNA PRADESHIYA SABHA

ROADS and lanes by Local Councils in Sabaragamuwa Province published by the Governor of Sabaragamuwa Province in *Extraordinary Gazette* No. 2316/20 and dated 24th January 2022 to be read with Section 24 of Pradeshiya Sabha Act, No. 15 of 1987 Sabaragamuwa from the series "Orders on the preparation of road plans and publication of notices showing the list of names". In accordance with the work assigned to the Local Councils of the province, it is hereby decided under number 36 on 16.10.2024 that the roads and lanes included in the following schedule should be declared as roads and lanes owned by the Kolonna Pradeshiya Sabha.

Any road or lane included in the said sub-register through thirty lands or to any part of any land, it is hereby announced that if the party claiming the said land is of the option, they should take action to file a case in the competent court before the expiry of a period of three months from the date of this announcement published in order to map their right to the said lane. It is further announced that every road and lane included in the said sub-document, where no such case has been assigned before the expiry of the said three months period, shall be deemed to be a road or lane owned by the Kolonna Pradeshiya Sabha.

K. V. P. IRANGANI.

Secretary and Powers, Functions, Duties
Implementation Officer,
Kolonna Pradeshiya Sabha.

At the Office of the Pradeshiya Sabha Kolonna,
24th October 2024,

Third Schedule
Section 08

Serial No.	Code of the Road	Name of the Road	Starting Coordinate (Kandawala Sri Lanka)		Ending Coordinates (Kandawala Sri Lanka)		Length of the Road (Meter)	General Width of the Road (Meter)	Developed Width of the Road (Meter)

1. The first step in the process of identifying a problem is to recognize that a problem exists. This involves gathering information about the situation and identifying the specific issue that needs to be addressed.

2. Once a problem has been identified, the next step is to define the problem clearly. This involves stating the problem in a concise and specific manner, identifying the scope of the problem, and determining the goals that need to be achieved.

3. The third step in the process is to generate potential solutions. This involves brainstorming ideas and considering different approaches to solving the problem. It is important to consider a wide range of options and to evaluate the potential benefits and drawbacks of each solution.

4. The fourth step is to select a solution. This involves evaluating the potential solutions and choosing the one that is most likely to be effective. This step may involve consulting with others and seeking their input.

5. The final step in the process is to implement the solution. This involves putting the chosen solution into action and monitoring its progress. It is important to be flexible and to make adjustments as needed during the implementation process.

1. The first step in the process of identifying a problem is to recognize that a problem exists. This involves gathering information about the situation and identifying the specific issue that needs to be addressed.

2. Once a problem has been identified, the next step is to define the problem clearly. This involves stating the problem in a concise and specific manner, identifying the scope of the problem, and determining the goals that need to be achieved.

3. The third step in the process is to generate potential solutions. This involves brainstorming ideas and considering different approaches to solving the problem. It is important to consider a wide range of options and to evaluate the potential benefits and drawbacks of each solution.

4. The fourth step is to select the best solution. This involves comparing the potential solutions and choosing the one that is most likely to be effective and feasible. It is important to consider the resources available and the time constraints when making this decision.

5. The final step in the process is to implement the chosen solution. This involves putting the solution into action and monitoring the progress. It is important to communicate the solution to all relevant parties and to ensure that everyone is working towards the same goal.

1. The first step in the process of identifying a problem is to recognize that a problem exists. This involves gathering information about the situation and identifying the specific issue that needs to be addressed.

2. Once a problem has been identified, the next step is to define the problem clearly. This involves stating the problem in a concise and specific manner, identifying the scope of the problem, and determining the goals that need to be achieved.

1. The first step in the process of identifying a problem is to recognize that a problem exists. This involves gathering information about the situation and identifying the specific issue that needs to be addressed.

2. Once a problem has been identified, the next step is to define the problem clearly. This involves stating the problem in a concise and specific manner, identifying the scope of the problem, and determining the goals that need to be achieved.

3. The third step in the process is to generate potential solutions. This involves brainstorming ideas and considering different approaches to solving the problem. It is important to consider a wide range of options and to evaluate the potential benefits and drawbacks of each solution.

4. The fourth step is to select a solution. This involves evaluating the potential solutions and choosing the one that is most likely to be effective. This step may involve consulting with others and seeking their input.

5. The final step in the process is to implement the solution. This involves putting the chosen solution into action and monitoring its progress. It is important to stay flexible and be prepared to make adjustments as needed.

26. The Commission has also received information from the Ministry of Health, the Ministry of Education and the Ministry of the Interior, that the Ministry of Health has been providing information to the Ministry of Education and the Ministry of the Interior, regarding the health status of the children of the detainees, and that the Ministry of Health has been providing information to the Ministry of Education and the Ministry of the Interior, regarding the health status of the children of the detainees.

1. The first step in the process of identifying a problem is to recognize that a problem exists. This involves gathering information about the situation and identifying the specific issue that needs to be addressed.

2. Once a problem has been identified, the next step is to define the problem clearly. This involves stating the problem in a concise and specific manner, identifying the scope of the problem, and determining the goals that need to be achieved.

3. The third step in the process is to generate potential solutions. This involves brainstorming ideas and considering different approaches to solving the problem. It is important to consider a wide range of options and to evaluate the pros and cons of each.

4. The fourth step is to select a solution. This involves evaluating the potential solutions and choosing the one that is most likely to be effective. It is important to consider the feasibility of each solution and to weigh the benefits and costs of each.

5. The final step in the process is to implement the solution. This involves putting the chosen solution into action and monitoring its progress. It is important to communicate the solution to all relevant parties and to ensure that everyone is working towards the same goal.

1. The first step in the process of identifying a problem is to recognize that a problem exists. This is often done by comparing current performance with a desired state or goal. If there is a significant difference, a problem is identified.

2. Once a problem is identified, the next step is to define the problem more precisely. This involves determining the scope of the problem, the resources available, and the constraints that may be affecting the problem.

3. The third step is to analyze the problem. This involves identifying the causes of the problem and determining the relationships between different factors. This step is often done using tools such as fishbone diagrams or the 5 Whys technique.

4. The fourth step is to develop a solution. This involves brainstorming potential solutions, evaluating them, and selecting the most appropriate one. This step is often done using tools such as SWOT analysis or the Delphi method.

5. The fifth step is to implement the solution. This involves putting the chosen solution into action and monitoring its progress. This step is often done using tools such as Gantt charts or PERT charts.

6. The final step is to evaluate the results. This involves comparing the actual results with the desired state and determining whether the problem has been solved. If not, the process may need to be repeated.

1. The first step in the process of identifying a problem is to recognize that a problem exists. This involves gathering information about the situation and identifying the specific issue that needs to be addressed.

2. Once a problem has been identified, the next step is to define the problem clearly. This involves stating the problem in a concise and specific manner, identifying the scope of the problem, and determining the goals that need to be achieved.

3. The third step in the process is to generate potential solutions. This involves brainstorming ideas and considering different approaches to solving the problem. It is important to consider a wide range of options and to evaluate the potential benefits and drawbacks of each solution.

4. The fourth step is to select a solution. This involves evaluating the potential solutions and choosing the one that is most likely to be effective. This step may involve consulting with others and seeking their input.

5. The final step in the process is to implement the solution. This involves putting the chosen solution into action and monitoring its progress. It is important to evaluate the results of the solution and to make adjustments as needed.

1. The first step in the process of identifying a problem is to recognize that a problem exists. This is often done by comparing current performance with a desired state or goal. If there is a significant difference, a problem is identified.

2. The second step is to define the problem. This involves identifying the specific aspects of the problem that need to be addressed. It is important to be clear and concise in this step, as it will guide the rest of the process.

3. The third step is to analyze the problem. This involves identifying the causes of the problem and the factors that contribute to it. This step is often the most challenging, as it requires a deep understanding of the system and the ability to think critically.

4. The fourth step is to develop a solution. This involves identifying the actions that need to be taken to address the problem. It is important to consider the feasibility of the solution and the potential consequences of each action.

5. The fifth step is to implement the solution. This involves putting the solution into action and monitoring the results. It is important to be flexible and willing to make adjustments as needed.

6. The sixth step is to evaluate the results. This involves comparing the current performance with the desired state and determining whether the problem has been solved. If not, the process may need to be repeated.

7. The seventh step is to document the process. This involves recording the steps taken and the results achieved. This is important for future reference and to ensure that the process is repeatable.

8. The eighth step is to communicate the results. This involves sharing the results with the relevant stakeholders and ensuring that they understand the situation and the actions taken.

9. The ninth step is to review the process. This involves reflecting on the process and identifying areas for improvement. This is an ongoing process that should be repeated regularly.

10. The tenth step is to celebrate success. This involves acknowledging the achievements of the team and celebrating the successful resolution of the problem. This is important for maintaining morale and encouraging future success.

1. The first step in the process of creating a business plan is to conduct a thorough market research. This involves identifying the target market, understanding their needs and preferences, and analyzing the competitive landscape. Market research can be conducted through various methods, including surveys, interviews, and focus groups.

2. Once the market research is complete, the next step is to define the business's mission and vision. The mission statement should clearly state the purpose of the business and the values it stands for. The vision statement should describe the long-term goals and aspirations of the business.

3. The third step is to develop a marketing strategy. This involves identifying the most effective ways to reach the target market and promote the business. The marketing strategy should include details about the advertising channels, promotional activities, and sales tactics.

4. The fourth step is to create a financial plan. This involves estimating the costs of starting and operating the business, and projecting the revenue and profits. The financial plan should include a detailed budget and a break-even analysis.

5. The final step is to write the business plan. This involves putting all the information gathered in the previous steps into a coherent and professional document. The business plan should be clear, concise, and easy to understand, and it should provide a comprehensive overview of the business and its future prospects.

1. The first step in the process is to identify the problem or issue that needs to be addressed. This involves gathering information and understanding the context of the problem.

1. The first step in the process of creating a new product is to identify a market need. This involves conducting market research to understand the preferences and behaviors of potential customers. Once a need is identified, the next step is to develop a concept that addresses this need. This concept should be unique, valuable, and feasible. The third step is to create a prototype, which is a preliminary model of the product. This allows the team to test the concept and make necessary adjustments. The fourth step is to conduct a feasibility study, which evaluates the technical, financial, and operational aspects of the product. Finally, the product is launched into the market, and the team monitors its performance and customer feedback to make further improvements.

1. The first step in the process of identifying a problem is to recognize that a problem exists. This is often done by comparing current performance with a desired state or goal. If there is a significant difference, a problem is identified.

Abstract

Abstract The purpose of this study was to determine whether there were differences in the prevalence of self-reported depression between men and women who had been exposed to violence during childhood and adulthood. Data from the National Longitudinal Study of Adolescent Health (*N = 9,800*) were used to examine the association between exposure to violence and self-reported depression among adolescents aged 15–17 years. Results showed that exposure to violence during childhood and adulthood was associated with higher rates of self-reported depression. Furthermore, the association between exposure to violence and self-reported depression was stronger for women than for men.

1. The first step in the process of creating a new product is to identify a market need. This involves conducting market research to understand what consumers want and what problems they are facing. Once a need is identified, the next step is to develop a concept for a product that addresses that need. This is often done through brainstorming sessions with a team of designers and engineers. The concept is then refined through prototyping and testing. Once a viable concept is developed, the next step is to create a business plan that outlines the costs of production, the pricing strategy, and the marketing plan. Finally, the product is manufactured and distributed to the market. The entire process is iterative, with feedback from consumers and the market being used to refine the product and the business plan.

Abstract The purpose of this study was to determine whether there were differences in the prevalence of self-reported depression between men and women who had been exposed to violence during childhood and those who had not. Data from the National Longitudinal Study of Adolescent Health (Add Health) were used. A total of 9,800 adolescents completed the survey. The results showed that the prevalence of self-reported depression was significantly higher among those who had been exposed to violence during childhood than among those who had not. This finding suggests that exposure to violence during childhood may increase the risk of developing depression later in life.

1. *Introduction*

Received 2004-05-10; revised 2004-06-10; accepted 2004-06-10. This work was supported by the National Natural Science Foundation of China (grant number 40275001) and the National Natural Science Foundation of China (grant number 40275001).

Abstract. We consider the problem of finding a function f that minimizes the functional $J(f) = \int_0^1 |f'(x)|^2 dx$ subject to the boundary conditions $f(0) = 0$ and $f(1) = 1$. The function f is required to be piecewise linear, with the number of segments n fixed. We show that the minimum value of $J(f)$ is achieved by a function that is linear on each segment, and that the minimum value is $\frac{1}{n+1}$.

1. The first step in the process of identifying a problem is to recognize that a problem exists. This involves gathering information about the situation and identifying the specific issue that needs to be addressed.

2. Once a problem has been identified, the next step is to define the problem clearly. This involves stating the problem in a concise and specific manner, identifying the scope of the problem, and determining the goals that need to be achieved.

3. The third step in the process is to generate potential solutions. This involves brainstorming ideas and considering different approaches to solving the problem. It is important to consider a wide range of options and to evaluate the potential benefits and drawbacks of each solution.

4. The fourth step is to select a solution. This involves evaluating the potential solutions and choosing the one that is most likely to be effective. This decision should be based on a careful analysis of the pros and cons of each solution and on the values and priorities of the organization.

5. The final step in the process is to implement the solution. This involves putting the chosen solution into action and monitoring its progress. It is important to communicate the solution to all relevant parties and to ensure that everyone is working together to achieve the desired outcome.

1. The first step in the process of identifying a problem is to recognize that a problem exists. This involves gathering information about the situation and identifying the specific issue that needs to be addressed.

2. Once a problem has been identified, the next step is to define the problem clearly. This involves stating the problem in a concise and specific manner, identifying the scope of the problem, and determining the goals that need to be achieved.

3. The third step in the process is to generate potential solutions. This involves brainstorming ideas and considering different approaches to solving the problem. It is important to consider a wide range of options and to evaluate the potential benefits and drawbacks of each solution.

4. The fourth step is to select the best solution. This involves comparing the potential solutions and choosing the one that is most likely to be effective and feasible. It is important to consider the resources available and the time and effort required to implement each solution.

5. The final step in the process is to implement the chosen solution. This involves putting the solution into action and monitoring its progress. It is important to communicate the solution to all relevant parties and to ensure that everyone is working towards the same goal.

1. The first step in the process of creating a business plan is to conduct a thorough market research. This involves identifying the target market, understanding their needs and preferences, and analyzing the competitive landscape. Market research can be conducted through various methods, including surveys, interviews, and focus groups.

2. Once the market research is complete, the next step is to develop a clear and concise business model. This model should outline the company's value proposition, revenue streams, and cost structure. It should also define the company's target market and the strategies for reaching it.

3. The third step is to create a detailed financial plan. This plan should include a budget, a cash flow statement, and a break-even analysis. It should also project the company's financial performance over a period of time, typically three to five years.

4. The fourth step is to develop a marketing and sales strategy. This strategy should outline the company's marketing mix, including its product, price, place, and promotion. It should also define the company's sales channels and the strategies for reaching its target market.

5. The final step is to create a management team. This team should consist of individuals with the necessary skills and experience to manage the company's operations. It should also include a clear division of responsibilities and a system for monitoring and evaluating performance.
